IRS Citations · Logic Chains · Instant Answers · Trusted Authority

Interactive Demo

Can my client deduct startup expenses if they didn't generate income this year?

Get Answer

Designed for Tax Professionals

Save hours of research time with intelligent tools built specifically for CPAs and tax advisors.

AI-Powered Reasoning

Our advanced AI models provide logical reasoning pathways that explain tax concepts clearly.

IRS Citations

Every answer links directly to relevant IRS publications, regulations, and code sections.

Semantic Search

Natural language processing finds relevant materials even when keywords don't match exactly.

Data-Backed Insights

Analyze patterns across ruling histories and case law to predict outcomes.

Trusted Authority

Built on comprehensive tax law databases with regular updates for the latest IRS guidance.

Time Saving

Find answers in seconds that would take hours of manual research to compile.

Taxentia Query Assistant

Your tax question:

Can my client deduct startup expenses if they didn't generate income this year?

Get Answer →

Taxentia.ai Response

Yes, your client can deduct up to $5,000 in startup expenses in the first year, even if they haven't generated income yet, as long as the business has actually begun operations. The remainder of the startup costs above $5,000 must be amortized over 180 months. The critical factor is that the business has started active operations, not that it has earned revenue. If the business has not yet started operations (as opposed to simply not generating income), then the expenses cannot be deducted until it does.

Citation:

IRC §195; Publication 535, Chapter 7

Logic Chain

1. First, we need to understand if the business meets the requirement of 'active trade or business' under IRC §195.
2. Based on the context, a business that never becomes active cannot deduct or amortize startup expenses.
3. However, a business that has started operations but hasn't generated income yet is different from a business that never becomes active.
4. The key question is whether the business has begun operations, not whether it has generated income.

Sources Referenced

Pub. 535, Chapter 7

Startup costs are the expenses incurred before a business begins active operations. Under IRC §195, up to $5,000 may be deducted in the first year with the remainder amortized over 180 months.

Pub. 535, Chapter 7

If the business does not begin, startup expenses are not deductible. You may not amortize expenses if the trade or business never becomes active.

Pub. 535, Chapter 7

Organizational costs of setting up a corporation or partnership may also be amortized over 180 months, separate from startup costs.

Tax Research that Works the Way You Think

Taxentia.ai was designed by tax professionals for tax professionals. We understand the complexities of tax research and the need for authoritative, well-cited answers.

Our platform combines cutting-edge AI with comprehensive tax databases to deliver precise answers with full citations to IRS publications, code sections, rulings, and case law.
